ABSTRACT OF THE DISCLOSURE

PROCESS FOR PREPARING NITRILE COMPOUNDS FROM ETHYLENICALLY UNSATURATED COMPOUNDS

The present invention concerns a process for hydrocyanating ethylenically unsaturated organic compounds to compounds containing at least one nitrile function. It relates more particularly to hydrocyanation of diolefins such as butadiene or of substituted olefins such as alkenenitriles, instance pentenenitriles. According to the process of the invention the reaction is implemented in the presence of a metal complex catalyst comprising a transition metal such as nickel and an organic ligand.
